Hi, this is Bill McRea.

There are a lot of questions about what the Massive Passive software. Massive Passive Profits software is a plugin that you can use to build thousands of websites from a traditional blog that you would build using your hosting account's Fantastico service.

You really need to use a cPanel-based host.

That means if you're going to be building multiple domains, you're going to at least need reseller hosting to do this with Hostgator, Blue Host, Host Monster…as long as they have cPanel access for each domain and you can set up what's called Wild Card subdomains.

You can use this software to build literally thousands of fully monetized sites in a week. It is a massive yet simple system for generating passive income. Now, if you're not familiar with blogging, we provide a significant amount of training to show build your first blog and how to upload the plugin and install it into your blog so that you can begin building these passive websites.

Referring to the following video http://www.youtube.com/watch?v=xdCmNvurwsE

When you upload and activate the software, by using the typical upload-and-activate software routine from within a WordPress blog, you go to Plugins, Add New. You upload the plugin called Massive Passive Profits, it's called wp-mpp, and you simply hit the Install Now button.

Once you've done that, you will have to activate the software by going down to the Edit Settings. You will beed to Enable the software. You will have to put in your Admin Email address, and your Amazon Affiliate information in to the system to activate the software. If you don't have an Amazon account, we provide training on how to get an account and how to get access and your security key. This is a requirement of the software.

You can also elect to set it up using a CRON Job. It is very simple to do and it makes the whole system extremely reliable. We highly recommend it and we provide training on doing this as well. You only need to do this one time for each domain.

Every one of the subdomains will automatically be taken care of based on this one-time set-up. Then all you need to do is go into Sites and start building websites.

 I'll build one right now in front of you. :
http://www.youtube.com/watch?v=xdCmNvurwsE

We provide a system that will allow you to clone your template website, so that you don't have to do all the work of monetizing each one of these sites. We also provide a separate system, called Mass Deploy, that will allow you to upload a CSV file and automatically build hundreds of websites at one time.

There's a video on YouTube showing you exactly how to do that. If you want to go see that video, go to the following URL http://www.youtube.come/watch?v=dh5rQnbCJyU.

With our cloning system, it allows you to build hundreds of websites that are already completely monetized, so that you can generate a small amount of profit on a large number of website The Massive Passive Profits system is the easiest mass-blogging system ever created. And anyone can do with a little bit of training.

Once you get that training under your belt, you can build hundreds and hundreds of these money-grabbing machines…every day. This is your best chance to generate some really nice passive income.
