This is a free excerpt of the SEO Book covering the pay per click search engine market.

The entire SEO Book covers many other search engine marketing strategies such as:

- Keyword research
- Choosing a domain name
- Placing keywords in your page copy
- Website submission
- Link building
- Effectively using SEO tools
- Tracking your progress
- and many other topics...

Go to [SEO Book.com](http://SEOBook.com) to get your full copy of The SEO Book today.

This chapter is essentially the same as the PPC chapter of The SEO Book. The one major difference between the two is that this guide has affiliate links in it to cover some of the costs of formatting, updating, and giving away this information. The SEO Book does not have affiliate links in it, although the same tools are recommended in both documents.

**Disclaimer:** The information provided in this guide is useful and helpful to the best of my knowledge. The author of this free guide shall not be held liable for the use or misuse of information contained within.

## Pay Per Click

**P**ay per click search engines can give you instant traffic and allow you to test new business models in real time. The pay per click market is competitive though. It is worth spending an extensive period of time learning how to write and target ads, tracking your competitors, and doing deep keyword research before jumping in.

### Before You Start

#### Metrics Based Marketing:

PPC search engines provide a highly trackable marketing medium. Frequently people begin marketing without any idea as to the approximate value of a click. If you do not set up a value range and track the results you have no way to distinguish good marketing from bad marketing.

To know the value of a click you need to decide what the goal of your marketing is. If you are just branding then you should expect to lose money and tracking may not be that important.

If you are using pay per click search engines for direct product marketing you need to know how much each click is worth.

#### Typical Conversion Rates:

Lead generation sites typically have a conversion rate around 10 to 12%, but can go as high as 30% + if they are properly targeted and exceptionally appealing to visitors. Since little investment is needed to arrive at your website and so many others are just a click away selling stuff the web has a conversion rate similar to direct mail advertising. High ticket items have a lower conversion rate and unique cheap items tend to have higher conversion rates. Many stores find typical conversion rates might be anywhere from .3 to 4%.

#### Doing the Math:

There are a ton of factors that go into click price. It is somewhat hard to measure branding, but ad distribution can help with that. Most other things are tangible.

If you know your average order size, profit per order, and estimated conversion rate you can get a good idea what clicks are worth. Some people also factor in lifetime cost of a customer, but it is harder to measure and there is still enough opportunity in many markets to do your math primarily based on direct return.

### Before You Start:

It is a good idea to look at the various ads which are displayed in which order over time. The top guy might be an idiot losing tons of money or a person who is paying an extreme premium for branding.

If ads from affiliate marketers or smaller sites are ranking around the same ad position over the course of a few weeks to a month then they are probably doing something right (generating profits). It is worth it to take a couple weeks to do deep keyword research and market analysis before jumping into pay per click search engine marketing.

### You Will Lose Money:

Most clicks end up being failures. Even if you have a 30% conversion rate that means that 7 out of 10 clicks did nothing for you. When you dip your toes into the pay per click market there stands a good chance you will lose money before you start making money. The main reasons are:

- **You need to learn how the systems work**, learning:
  - what terms are important and what ones are not.
  - how to target the ads
  - how to write the ad copy
  - how to bid and what terms are overpriced
- You are competing against the best accounts.
  - Some competing advertisers may have other intangible assets which give them an unfair advantage.
  - If you are brand new your competitors have more experience than you do.
  - Some ad campaigns have been fine tuned for months or years.

Search engines try to sell the concept of pay per click marketing saying that it is so targeted that everyone makes money, but in the real world that is not how things work. Some markets are competitive and will require learning, sound strategy, and tracking.

### Why Pay Per Click is Important:

I was working to raise the rankings of one client for a few competitive phrases. It was taking a decent investment in time and money. I then started a pay per click campaign to test a ton of terms. As it turns out his conversion rate for the words we thought we needed were not great. There were a couple other terms with lower search frequency and less competition which converted exceptionally well.

Had we not done pay per click marketing we may have never properly focused his SEO efforts. In less than a month on about \$300 we increased the productivity of his site ten fold.

The only way to be certain of anything in marketing is to test it. Pay per click marketing allows you to test real time with the fastest feedback loop of any marketing medium in the world.

## What is Pay Per Click

In 1998 Overture pioneered the idea of selling contextual based advertising. You could buy search results for as low as a penny or two per click. This system has quickly evolved into one of the worlds most competitive marketplaces.

### Why Use Pay Per Click?

Sometime you can not afford to...or simply do not want to wait. Pay per click search engines allows you to list atop search results quickly. This will allow you to:

- Prototype ideas to track demand before you invest into a new business model or are stuck footing the bill for a new site design.
- Quickly gather feedback on market conditions.
- Split test to a live audience and gather results in real time.

You can use Google AdWords to offer a free white paper about some topic from a one page website. If nobody is interested in downloading your white paper or you can not seem to get enough clickthroughs then odds are:

- the market is not yet ready for your product
- or you are marketing it from the wrong angle
- or you are marketing it to the wrong people

### Who Should I Trust in Pay Per Click?

There are a few major players in the pay per click arena. Overture (as of writing this) currently has network partnerships that span Yahoo!, MSN, InfoSpace, AltaVista, AllTheWeb and many other partners. Google AdWords has a larger distribution network across Google, AOL, About, Earthlink, and many others sites...even a few of my own.

For the sake of this report I am only going to cover [Google AdWords](#) and [Yahoo! Search Marketing](#). There are a few other pay per click search engines ([Ask Jeeves](#), [Business.com](#), [Miva](#), [Kanoodle](#), [Enhance Interactive](#), [7Search](#), [Findology](#), [Search123](#), [Epilot](#)) that may be well worth a look **after** trying Google AdWords and Yahoo! Search Marketing. While beginning pay per click advertising I would recommend **only using Google AdWords and Yahoo! Search Marketing**.

## Why Use Large Pay Per Click Search Engines (Google AdWords + Yahoo! Search Marketing)?

When you use large pay per click search engines you guarantee you are getting good traffic and that your business model is scalable.

Smaller engines provide slower feedback loops and some may not even provide quality traffic.

- The results will be scaleable.
- The feedback will be quicker.
- Large pay per click search engines offer many great tracking and targeting features free.
- Larger pay per click search engines generally present higher quality traffic and are less susceptible to fraud.
- It is less complex managing two or three accounts versus 100 accounts.
- It's easier to track the ROI on 2 accounts than on 100 accounts.
- Many of the extremely small search engines **never have real traffic**. You are wasting your time registering with them.
- Even some of the better second tier search engines may waste a big hunk of change. In early November 2004 I tried using LookSmart. It sent me twice as much traffic as Yahoo! Search Marketing and traffic from LookSmart had a 95% bounce rate. That means that 19 of 20 site visitors from LookSmart immediately left and **I paid for a ton of garbage traffic**. The quality of traffic from smaller engines will vary from term to term, but its best to go with the biggest guys off the start and then try some of the smaller engines.

### Case Study: the Ignorant Bidder

If a term does not convert well for you then it may not be worth it to rank near the top for that term.

Not too long ago a person was bidding on an eBay ad for "SEO Book" at over \$1 a click. Assuming I can get a 1.5% conversion rate I can afford to pay that much, but this person was just throwing away their money.

Just to test the waters I placed my ebook on eBay and it did not go for anywhere near what I usually sell them for.

I find it hard to believe the person who was bidding a dollar a click was making any money. They later lowered that bid to 21 cents. In some markets there will be dumb companies that rotate in, lose money, and then go bankrupt. By the time they go bankrupt others may soon take their money wasting market position.

Some terms are not worth buying at the price the keywords go for.

## Landing Page Tips:

Conversion is a large part of how successful a pay per click campaign is. A few tips to improve your landing pages:

- **Remove navigation:** unless it is necessary remove other options. Let people do what you want them to do, and don't give them many other options.
- **Make link text appealing:** people tend to glance over copy instead of deeply reading every word. Since links are action points people tend to pay more attention to link text. Make sure link text is appealing since it is far more likely to get read than most of the page copy.
- **Show them their location:** Place the words they searched for in large text at the top of the page to show them they are in the right location. If you are a large merchant with many products maybe use something like search results for: *their search term*. In many cases it is best to point people at a landing page instead of the home page.
- **Other ideas:** some of the other concepts listed throughout this ebook (such as using short paragraphs and subheaders) also apply to landing pages. Corey Rudl constantly retested his landing pages. You can learn a good amount by seeing how he changed his landing pages over time. MarketingSherpa also has a [landing page handbook](#) for sale.

## Yahoo! Search Marketing

Yahoo! Search Marketing was formerly named Overture.

### How Does Yahoo! Search Marketing Work?

Yahoo! Search Marketing is primarily a manually edited pay per click search provider. You write ads for your website and they get approved to appear in the search results on YSM partner websites. YSM bid prices are transparent. You can usually see exactly what your competitors are bidding at any given time.

YSM places exact match listings above broad match listings. This means that if you bid on the exact term that someone is searching for you will rank above ads that are matched via broader matching options.

If you bid 10 cents for “best seo book” and someone else bids 25 cents for “seo books” your best seo book ad will show above theirs if someone is searching for “best seo book.”

YSM also truncates search terms for ad targeting, so book and books should target the same ads.

### YSM Bid Prices vs. Click Costs:

With YSM you pick a maximum bid price and your bid will never exceed that. Their software has a bid discounter built in, so often times your average bid cost may be less than your bid prices. YSM makes most bid prices transparent. In competitive fields competitors will ensure your click costs are near your bid price.

### Bid Jamming:

In some niche markets there will only be a couple people who place exceptional value on ultra qualified leads. For example, a Chicago DUI attorney may bid much higher for the term 'Chicago DUI attorney' than a general nationwide firm would. If there are only a couple competitors in a market, it is not uncommon for the top few bids to be \$5 or \$10 while the rest of them are around 25 cents or less.

For example, if they bid \$10 you can bid a max bid of \$9.99. If the third placed person is only bidding 25 cents your clicks will cost you 26 cents each while ensuring your competitor pays a full \$10 per click.

Of course you want to monitor your accounts closely if you are using aggressive bidding techniques or bid jamming people. Some competitors will be stupid and let you take their lunch money. Others may be smart and re adjust their bids to bid jam you. Some will go so far as click fraud, so you need to watch your account closely if you are bidding aggressively in competitive markets.

### Bid to Position:

When you use the bid-to-position bidding strategy, it also hides your full bid price, only showing 1 cent more than the person below you. Bid to position allows you to bid a max price and max position. Yahoo! will keep your click cost and ranking at or below your max.

### YSM Programs:

YSM offers a [\\$10 bid bonus](#) when you open an account, but has a \$5 startup fee (which is converted to click credit), and it has no monthly minimum spend. They also have a FastTrack program where their account representatives will set up your account for a one time \$199 fee. I recommend taking the time to set up your own account. You know your products better and are more interested in your own success than some random YSM editor is, they are more interesting in ensuring you spend as much as you are willing to.

YSM recently launched Local Match, which allows you to target your ads from a .5 to 100 mile radius of your business location. The Local Match product requires that you have a business with a physical address, but it does not require a website. These ads give driving directions to your place of business. Local Match ads show up in the same location where other YSM ads appear.

YSM also offers a paid inclusion program by the name of Search Submit Express (which I generally consider a waste of money for most websites). Search Submit Express gives your sites 48 hour refresh throughout the Yahoo! powered search products. SSE is a one time \$49 review fee and also has an **incremental cost per click**. SSE is good for sites which:

- are rapidly changing
- or are having dynamic indexing problems
- or need indexed quickly
- or need the associated tracking offered by Search Submit Express

### Free Yahoo! Search Marketing Tools:

Yahoo! offers a suite of tools to help their advertisers set up their accounts.

- **Yahoo! Search Term Suggestion Tool:** shows the frequency of searches across the YSM network for the prior month.  
(<http://inventory.overture.com/d/searchinventory/suggestion/>)
- **Yahoo! View Bid Tool:** show the highest bidders for a specific search term.  
([http://uv.bidtool.overture.com/d/search/tools/bidtool/?Keywords=casino&mkt=us&lang=en\\_US](http://uv.bidtool.overture.com/d/search/tools/bidtool/?Keywords=casino&mkt=us&lang=en_US))
- **Yahoo! Regional Search Term Suggestion Tools:** gives [country or region specific search frequency](#).
- **Yahoo! Advertiser Workbook:** [free downloadable ebook released](#) by Yahoo! to help you get the most out of your YSM campaign.

### YSM Search Term Suggestion Tool Errors:

YSM truncates their search terms. While the plural and singular versions of search terms will greatly differ in search volume YSM just lumps them together.

Please note that the Yahoo! search term suggestion tool tends to run high since many automated bots and bid managers scour through their partner network.

WordTracker tracks click data from the meta search engines by the name of Dogpile and WebCrawler. Since WordTracker makes their money by selling data versus clicks you can usually expect more legitimate traffic measurements using WordTracker. Digital Point created a [free keyword suggestion tool](#) which compares both traffic estimates.

[KeywordDiscovery.com](#) and [GoodKeywords.com](#) are two additional useful keyword research resources.

When doing pay per click advertising deep keyword research is a fundamental part of most successful campaigns. Many of the keyword research tools are a bit top heavy (only showing the most common terms), but [WordTracker](#) has a few cool features called lateral search and thesaurus which help you find similar keywords. I tested many of the keyword research tools and WordTracker is generally the only tool I feel is worth paying an ongoing subscription for.

Another option to finding deep keyword data is to run a broad matched Google AdWords ad (AdWords and matching options are discussed later in this chapter) and mine keyword data from the referral strings. Make sure you watch your budget closely and use negative terms to filter unwanted traffic if you use this technique.

### The Keys to Doing Well on Yahoo! Search Marketing:

Ensure you target your keywords properly and do not get in bidding wars. Do not bid high prices for exceptionally broad or generic phrases.

Your exact match listings will still compete against broad match listings, but if you make a list of targeted phrases then you will not likely pay for as many untargeted clicks as a person bidding for more generic phrases. If you use somewhat generic phrases you will want to make sure you use negative words to block terms you are not interested in.

A few good examples of good negative terms to block are cracks and free.

**Keyword tip: Spammed Out Guestbooks:** software or searching techniques which find spammed out guestbooks which have been visited by competitors can help you find many keyword variations. Keyword tools may help you find about 500 keywords, but the guestbooks sometimes may yield over 5,000.

[This free tool](#) (web based) or [this free tool](#) (downloadable software) or [this \\$50 tool](#) (downloadable software) will help you create a ton of keywords based on different keyword groupings. Using that tool will allow you to quickly create hundreds or thousands of relevant exact match terms. This is the tool I use to make up my extended keyword lists after I have already done primary keyword research. Microsoft Excel also has a similar feature.

Some of YSM's partners cut the ad text short so you will want to include your most important words near the beginning of the ad title and ad description.

YSM does not factor clickthrough rate into click cost. A high click through rate may bring more expenses without many more conversions so you will want to prequalify your site visitors. If you are trying to sell bulk stuff at wholesale do not be afraid to use the word wholesale in the title AND use \$1,000 minimum order in the ad text.

### PPC vs SEO in Small Paid Niches:

The more expensive the associated PPC ads are the more value there is in performing SEO on a site in a paid niche. If the average cost per click is \$5 then a \$1,000 SEO campaign pays for itself after only a few hundred targeted visitors.

YSM tends to be a bit sloppier than Google at monetizing niche advertisements. YSM's open bidding means that if there are only a couple strong advertisers one gets to stick the other and then get their ads cheap.

I have one client that gets most of their Yahoo! clicks at about 12 cents when her competitor pays about \$8 a click. On Google I pay closer to \$3 for each of those clicks.

If you are unsure whether an SEO campaign would justify its fees you can run a test PPC account to see what type of demand there is in your target market.

## Ad Writing Tips

There are many subtle hints to doing pay per click advertising correctly. A small change in conversion rate can make a huge difference once scaled out across the entire web. A marginal loss that turns into a marginal profit can become an automated revenue stream if you write your ads and convert slightly better.

### English to English Conversion

I went to the UK and realized just how different the versions of English are around the world. If you are targeting a specific region or country make sure your ads and website make sense to locals using words and phrases that make sense in their dialect.

### Use Specific Words!

Choosing a keyword for pay per click ads is similar to choosing a keyword for search engine optimization. You do not want generic terms. Frequently single word terms bring so many competitor clicks, compulsive clicks, and fraudulent clicks that it is hard to justify having them. Single words are usually poorly targeted AND more expensive. If you get into bidding wars over general terms you are playing the game all wrong. Actually, the game is playing you.

### Do Not Follow the Crowd:

Bid prices may not be justified where they are. Many times people feel they need to have certain terms. Without tracking them, these people lose money and do not know why they are losing.

Sometimes people chase things which give them an inflated artificial value. If you try to do exactly what the other ads are doing you may fail. In many markets the top listed ad is losing money on each and every click.

### Use Creativity to Lower Cost and Increase Conversion Rates:

### Keyword Selection:

The way to choose a term is to think creatively. Try to imagine what your user may type into the search engine to find what you are selling. You may even want to bid

on terms which exist in a question format. Think of your target audience. Maybe these terms are problems that people have. Perhaps these people do not even know your product exists.

### Writing Headlines:

Some of the most competitive ads in the world are magazine covers in a checkout aisle. You may want to glance through a few magazines covers and table of contents to find ways to write headlines and ads that pull sales.

### Place Keywords in Your Ads:

Many search engines highlight the words in ads that match the users query. Placing the search term in the ad will help your ad stick out more and improve your click through rate.

### Bid on Current Events & Buzz Words:

Often times my cheapest and highest converting ads are for industry buzz words that nobody else bid on. The phrase “Nigritude Ultramarine” (from the SEO competition) has sold multiple copies of this ebook. In addition it has introduced hundreds of visitors to my site at 8 cents per click.

### Start with a Verb:

You may be able to significantly increase your clickthrough rate if you start your ad copy with a powerful active verb.

### Additional Conversion Tips:

Many times it is not worth it to list at the top spot. Frequently trying to list at the top will cause bid wars with ego bidders. Usually listing a bit lower will improve the return on investment since you have less compulsive clickers and a lower bid price. In addition as people scroll down the ad list they do a better job of showing user intent. They do a better job of prequalifying themselves for the purchase.

If you make the ads sound compelling to the reader, you can improve your click through rate to where you get more traffic than the top ad does anyway. Try to solve a problem, show a benefit, or offer a solution to their problems.

### Link to a Landing Page:

Link into the exact page of your site you want visitors to see and not to your home page. By channeling all your traffic through the home page you may be telling a person that you do not care about them, and making it harder for them to convert into a sale. You may even consider adding a special page to your site that is made exclusively for that pay per click program. By linking directly into it from the ads you make it very easy to track ROI.

### Exact vs. Broad Matching (explained further in AdWords section):

Many search engines have different matching levels which are used to filter when your ad is displayed.

Exact match will only show for search results where the user searched specifically for your keyword phrase, **and only your keyword phrase**.

Phrase match will show when your exact phrase appears anywhere within the search query with the words in the same order.

Google and Yahoo! may show broad match ads when people search for synonyms of your keywords, or if your keywords appear in the search in any order your ads will display.

If you are new to pay per click you may want to use exact match until you get a feel for pay per click advertising, unless you are using broad match for keyword mining.

### Misspelled Words:

Spelling errors are sometimes corrected for by the search matching software, but sometimes they are not. Bidding on keywords ran together, missed keys, and spelling errors can help generate many cheap keyword variations. [This free tool](#) makes generating a list of misspelled terms quick and easy.

Make sure you do not place the misspellings in your ad copy as search engines do not want misspelled ads.

### Search & the Buying Cycle:

Many people perform multiple searches prior to purchase. Typically early searches tend to be more generic and as people get closer to determining what they want to buy they search for brand names (or brand name + keyword) more frequently.

It may be harder to determine the ROI on the more generic terms than on well branded terms as the branded clicks typically fall closer to the purchase date.

### Editing Ads:

Yahoo! manually reviews ads before they will display. Google will display many ads before they have had editorial approval. If you consistently break their rules they may no longer want to do business with you, but sometimes it makes sense to see where some of the limits are.

Knowing that Google shows some ads before they are reviewed by humans means that Friday evening would be a good time to run aggressive ads since they might be able to display all weekend before they are reviewed.

Once Yahoo! has accepted a keyword you can try to rewrite new ad copy that is a bit more aggressive. If they do not accept your new ad copy your old listing with your old ad copy should still remain.

## Customer Tracking and Bid Management

### How Tracking Works:

If you are paying by the click, you need to know what each of those clicks is doing. From the second they click until they leave or purchase.

If your server is already equipped with great tracking software it is easy to add a tracking tag on the back of your ads. Instead of your Yahoo! listing going to <http://www.domain.com/salespage.html> have it go to <http://www.domain.com/salespage.html?source=y+ad=6+keyword=fred>.

### Tracking Software:

My favorite log file analyzer is ClickTracks. It displays the webpage in a viewable browser highlighting the click ratio for each of the links. [ClickTracks](#) also allows you to set up custom tracking tags to view traffic through different visitor paths. While the software is expensive to some at \$500, it is a steal for some larger commercial websites.

Some other popular conversion tracking software options are [Keyword Max](#), [Index Tools](#), & [WebSideStory](#). If you are working with an exceptionally large account you may also want to try something like Efficient Frontier or Omniture.

[ConversionRuler](#) is inexpensive suitable software if you are primarily concerned with tracking pay per click results. ConversionRuler starts out around \$20 a month. Yahoo! and Google also provide built in conversion tracking software which they provide free.

There are also free tracking services such as [Extreme Tracking](#) and [SiteMeter](#) if you want to access referrer stats easily, but I would not recommend using them for tracking any of your pay per click statistics.

If you are a heavy spender on pay per click you will most likely want to use bid management software.

### Google Analytics:

Google also created a free cross platform conversion tracking tool which comes with their AdWords product. It works for tracking email ads, banner ads, and various PPC search engine ads.

On top of the free built in tracking feature Google also bought out Urchin and rebranded the tool as [Google Analytics](#). Google Analytics is free, and perhaps as full feature as any other conversion tracking tool, but if you use it you are sending your valuable market data back to your source of traffic. That may work against you if they use your best converting terms and most frequent referrals to recommend keywords to your competitors.

### Bid Management Software:

There are automated software programs which will track your bids and change them multiple times a day so that you achieve optimal efficiency with your ads. These programs can do various things such as: list your site relative to another website, bid gap management (list your site right where the first large bid gap is), bid trapping (bidding 1 cent underneath your competitor) and various other functions.

The best part of bid management software is that good bid management software can allow you to dynamically change the bid price from price per click to other metrics such cost per action or ROI.

If you get big into pay per click search engines and are managing multiple accounts it is worth the money to use a bid management program to help save time and money. Currently three market leaders in this field are [BidRank](#) (downloadable software), [Keyword Max](#) (hosted software application), and [Atlas OnePoint](#) (hosted software application). Yahoo! also recently created their own bid management tool by the name of [Yahoo! Search Optimizer](#).

### Fraud Prevention Software:

Most major pay per click search engines have fraud protection built into their system to protect the value of click prices. You should use your server logs to validate clicks if you are running a large campaign. Generally due to time overlaps and differences in reporting it is considered acceptable to have an error up to 10%. If your error is much larger than that be sure to notify the search engine.

If you have a good log file analyzer and understand how to use it then you have no need for a fraud prevention tool, but these tools make it quick and easy to spot potential fraud.

If you believe your competitors are clicking your ads or you are investing heavily in a competitive market you will want to take a look at additional fraud protection. Two of the current leaders in the PPC fraud prevention software market are [Who'sClickingWho](#) and KeywordMax [Click Auditor](#). They both keep track of clicks from IP addresses over time. Even if a competitor only clicks on your ads every few days it still adds up over time. This software allows you to accumulate the evidence you need to reverse charges and potentially file a lawsuit, but you need to have a large enough spend to justify it's cost. [Vericlix](#) is a similar but free product.

## Google Adwords

Google AdWords gets it's own extremely long section because it is exceptionally more complicated than other PPC search engines.

### Google vs. Yahoo!:

Google AdWords and Yahoo! are in a battle for search distribution. One of the two PPC services is distributed on nearly every major search engine or portal.

### Google Bid Prices vs. Click Costs:

With Google you pick a maximum bid price and your bid will never exceed that. Their software has a bid counter built in, so often times your average bid cost may be way less than your bid prices.

Google bid prices are not transparent so your competitors have no way to be sure exactly what your ads are costing (due to factoring in click through rates into effective bid price – which I will explain later). Often times your actual price is much lower than your maximum bid price. Remember that on Google it is average click cost that matters and that is often way different than your max bid.

### A few Things you can do with AdWords:

Google AdWords is an advertising medium like no other.

- There is only a \$5 signup fee (which is converted into bid credits).
- You can have ads across Google's network of sites in less than 10 minutes.
- Google's broad match technology allows you to receive extremely broad distribution while keeping it quick, easy, and simple to use. Overture now does this too.
- Google's vast distribution network makes it possible to test a business model without fully investing into creating that business.
- Google AdWords has syndication which you can turn on or off to determine whether or not you want AOL users and other searchers to see your message.
- Google has a content network of sites (including a few of mine) which you can decide whether or not you want to advertise on.
- Google has rolled out Geotargeting so you can target your ad to a country, state, metro area, zip code, or geographic radius of your choice. You can run multiple ads for the same words and test them against each other or send them to different pages to A/B split test your site or ad copy.

The best way to do well with Google AdWords is to create ads with a high click through rate. To do that you should use the search words in the copy and make sure the ads are well targeted.

### The Importance of a High Clickthrough Rate:

Google lets searchers determine the relevancy of the ads. Price for Google AdWords is a function of price per click \* click through rate. Google uses the average click through rate from the 1,000 most recent ads in this calculation. This means if you know how to get a high click through rate you can dominate Google AdWords by serving up ads at a far cheaper rate than what your competitors are paying.

The following table gives examples of how the Google system calculates bid prices and ad positions. Observe how some low priced ads appear above high priced ads because they are more relevant. Also observe that actual click cost sometimes varies widely when compared to max bid price. Some clicks are at times expensive and at other times they are cheap. It is the average click cost that matters, since that is what you are paying. Max bid does not matter since sometimes it can widely depart from actual click price. For example, I have seen a \$6.00 max bid which had clicks go for 77 cents.

Ad Number	Max Bid	Clickthrough Rate (relevancy)	Effective Bid	Ad Position	Actual Click Cost
1	0.40	5%	\$2.00	4	\$0.40
2	0.26	10%	\$2.60	2	\$0.26
3	1.00	2.53%	\$2.53	3	\$0.81
4	1.50	2%	\$3.00	1	\$1.31

Distribution buys further distribution. Off the start you will want to overbid slightly as you will be competing against the best ads that have developed over time in your niche.

The bid prices Google suggest are often somewhat high. I usually cut the suggested bid price by 50-75% when I first start an account. I then monitor closely and change it to try to maintain decent ad position.

### Quality Based Minimum Bids:

In the past Google had a 5 cent minimum bid price and only allowed ads to display if their Google clickthrough rate was above 0.5%, but in August of 2005 they shifted to a quality based minimum pricing.

This means that if your ad is deemed exceptionally relevant you can get clicks for as low as 1 cent, depending on how competitors are bidding. Also if your ads are not exceptionally relevant Google will still allow you to run advertisements, but you will have to pay a higher minimum bid to make up for the lack of ad relevancy.

Ads which are disabled from search syndication due to low relevancy and bid price still appear in the Google contextual ad program. I describe syndication later on in the chapter.

### Broad Match, Phrase Match, and Exact Match:

Google AdWords and Yahoo! both have different levels of word matching. Using [search term] will only return searches for **search term**, which is called exact match. Yahoo!'s exact match is a bit fuzzy, matching plurals and some common misspellings. Google's exact match is more precise, only matching the exact search.

Using "search term" will appear on **any ad that has search term in the query** (in the same order), which is called phrase match.

Using search term (no quotations or brackets) will appear on **any search that has search and term in it**. With broad matching, synonyms to search term will also return results. If you decide to start off with broad matching you should view the synonyms to ensure none of them are wasteful. This is especially true with acronyms or other terms with multiple well known meanings.

With Google there are all three levels of ad control, Yahoo! groups phrase match and broad match in a category called advanced match.

Examples:	Match Type	Will Show Results For	Will not show results for
[eat cheese]	Exact	Eat cheese	Any other search.
"eat cheese"	Phrase	Eat cheese, I love to eat cheese, Did you eat the cheese?	Cheese eat, or anything else which does not have both elements together in the same order as the search term
eat cheese	Broad	All above options and searches such as: cheese eating, ate cheddar, etc.	

Please note that Yahoo! combined broad match and phrase match into a single group called advanced match. Google still offers all three matching technologies.

### Google Ad Status:

If you do not understand something or are frustrated with something in particular feel free to voice your opinion online or see if it can be resolved through talking to your ad representative. Google AdWords has a [blog](#) (which does not want direct AdWords feedback), an [online support center](#), and you can contact Google advertising via phone at 1 (866) 2 Google.

Due to trademark issues some ad copy will be rejected by the automated review. When that happens you can request an exception and the ad will get a human review.

Google usually runs most ads before they have an editorial review, but they review them before placing them on partner sites. I have seen long review times in excess of a few days for Google site targeted AdSense ads.

Ads on Google.com have two states: active or inactive. If an ad is inactive you can make it active by bidding higher.

## Google Keyword Sandbox:

(Not the same thing as the SEO phenomena some people call the Google Sandbox.)

The Google Keyword Sandbox (<http://www.adwords.google.com/select/main>) will show you what terms will be used for AdWords broad matching. In addition it will suggest other keywords you may want to advertise for. Unlike many of the other keyword suggestion tools the Google Keyword Sandbox does not offer search frequency. To test search frequency you need to set up a bidding account for the specified term (please note: this can be expensive if you do not target your keywords and / or bid too high).

When setting up a new AdWords campaign, after you enter a few keywords Google offers showing you related terms you may want to advertise on.

In December of 2004 Google also created a [search term suggestion tool](#) by the name of Google Suggest which auto-completes partial search queries. It does not show search volumes, but search volume is believed to play a heavy role in its output. The tool is currently only available in some languages. Many Google Toolbar installs have this feature enabled.

## Negative Keywords:

There is a negative keyword option in both Yahoo! and Google AdWords. Any word that you do not want your ad to appear for can simply be blocked by placing -badword beneath your keywords.

There are many words which would indicate a lack of desire to purchase anything. Words like crack, free, pic, mp3 or download are often money losers if you do not remember to include these in your - keyword list.

Example keyword list showing a negative keyword: (should be much longer and more detailed, this is just an example though)

Eat cheese  
Buy cheese  
-free

Thus your ad would show up for many cheese queries, but for none that included the words free. Google also allows you to filter negative keywords at a campaign level.

## Dynamic Keyword Insertion:

By including your keywords in your copy, you help boost the clickthrough rate. Keywords which occur in your ads will be highlighted by the search engine results page display processing program. This draws additional attention to your ad.

Google now offers a tool which will place the active search word from your keyword list in the ad title automatically. If you have a group of similar keywords

that will still use the same body text you can enable this feature by writing out your normal body text, and placing {Keyword: default keyword} in the title of the ad.

When the chosen keyword is greater than 25 characters the default ad title will show. Otherwise the ad will show the search term as the ad title. Also note how I capitalized the K and W in keyword. This makes the words in your ad title appear capitalized. You also can place dynamic keyword insertion technology in the middle of sentences, such as “Buy Cheap {Keyword: default keyword}.”

### Getting Feedback from Your Account:

When opening up a Google AdWords account many people are hesitant to spend much money. In spending a small amount the business is essentially ignoring the feedback loop Google has set up.

Is it better to loose \$100 today, than to loose it over three months to finally come to the conclusion that you need to change? I would rather want to know that I need to change now. **Not all industries will make money from AdWords.** It is not a business model that will work perfectly across the board.

If you spent on targeted keywords your site should have a chance for success. Any good marketing internet based business relies on fast feedback loops to help it improve. Off the start you want to overspend on your ads so you can see which ones are effective. After a while you can regroup your ads by prices and then slash your bid price down. The ineffective ad groups or keywords will automatically shut off and your effective ads will keep displaying.

### Google Advertising Professional:

The [Google Advertising Professional program](#) is a program which allows marketers to be certified as a Google AdWords expert. The requirements are that you spend at least \$1,000 in a 90 day period after signing up, comply with their rules, and pass a test. After the 90 day period is up you can place a logo on your site which will perhaps make many people assume that Google endorses all of your SEO / SEM services.

The new program also allows you to link together up to 500 AdWords accounts so that you can access and manage them from a single login. Google also offers many [free online tutorials](#) which can help prepare you for the test and help you learn more about AdWords even if you do not want to take the test.

### Google AdWords is Responsible Advertising:

Add all the above features to the fact that Google also offers a free web based conversion tracking tool, and you can see how the AdWords system is a direct marketers dream. Everything is targetable, tangible, and measurable right down to the cent.

Google also offers a program by the name of [Google JumpStart](#) where they will help set up your account for you. Likely they will not be able to set up the best account for you, but they might be able to help you get your feet wet. The fee to join JumpStart is \$299, and the fee gets converted to bid clicks.

Keep in mind their goal is to have you spend money, which may not necessarily have the best ROI or best keyword buys in mind. Search engines would prefer that merchants get in bidding wars over a select small set of terms and miss out on some of the cheaper terms.

## Bonus Info: How to Improve Clickthrough Rate and Slash Google AdWords Costs to Maximize Profits:

### Determine Price By Position:

Often times the top ad position is losing money. To find out what the top position costs on Google AdWords you can enter \$50 as your bid price at the account setup process. The estimated cost per click would be how much that position would cost you assuming the standardized assumed click through rate (I believe this to be 1%).

You then can lower the bid price down until you get at position 2.0 then 3.0 and on down. Each time you get to a different integer you can look at the estimated click price to see what the click would cost assuming the standard click through rate. If you have a higher clickthrough rate the bid price for that position will be lower. If you have a low clickthrough rate your price will be higher.

### Determine how Competitive a Market is:

Often markets shift rather quickly. If you notice certain ads appearing again and again over time they are probably ads that are generating profits. For a quick glance at how competitive a market is you can download the software product by the name of [AdWords Analyzer](#) or [Keyword Locator](#). Keep in mind there are some significant limitations to this type of software, as noted in [my Keyword Locator review](#).

You also will want to record the top 10 results every few days for a few weeks to up to a month. If an ad is in around the same position (and is not from a huge corporation) after a month has passed they are probably earning profits.

### Listing Your ads on Top of Google Search Results:

While lower ad positions may have a better ROI in some markets they also may not provide adequate distribution to create significant profits. Google AdWords will occasionally list the top ad or two above the regular search results (versus off to the right side like most other AdWords ads). The top ads usually have a high clickthrough rate which helps lower click costs.

The ad position on the Google SERP right column is determined strictly by the equation  $\text{max bid} \times \text{ad clickthrough rate}$ . Before an ad can appear on top it has to be reviewed by a human and the ad has to be deemed extremely relevant. Relevancy is closely approximated by clickthrough rate, so the ads which display above the Google search results factor in clickthrough rate more heavily than max bid.

If you get an ad which is placed in a premium position and then edit it your ad may take at least a few days appear back in a top position.

### Find the Best Products:

If you see a lot of affiliate ads then typically there is a dominant player or system in that keyword termspace. You may want to try purchasing your competitors product to see the whole sales path all the way through to the backend.

If there are more non affiliate ads than affiliate ads odds are that there is no dominant player / system in the marketplace yet.

### Checking Broad Match, Phrase Match, & Exact Match:

Often times simply using exact match can drastically increase click through rates. To determine if a person is using exact match do a search for *keyword A adfkafjdjsadf keyword B*

If their ad still shows up they are using broad match. If their ads are showing up for nonsensical broad match searches then they usually have a decent click through rate and are making profits.

You then can search for *keyword A keyword B dfjdfkadsfa*. If their ad does not show up for the broad match check and shows up for this check they are using phrase match.

If their ad does not show up for the phrase match, then they are advertising via exact match. Any time you are checking competitors' ads you will want to refresh the screen multiple times as sometimes certain ads will not show.

### Extreme Local Targeting:

Google will allow you to target your ads to:

- any zip code or metropolitan area
- a radius near your business
- the defined coordinates of any polygon you enter

### Using Syndication:

Google has various levels of ad syndication explained in the below chart. Google.com is part of all search ad delivery options. You may chose to deliver content ads in conjunction with search ads by setting up separate content bids, or you may wish to deliver some ads just to the content network.

Syndication Type	Where Ad is Shown
Google	Google.com
Search	Google.com + AOL, Earthlink, & other search sites.
Content	Many contextual AdSense partner sites.
Site Targeted Branded Content CPM	Whatever sites you pick. Charged per impression.

You can check if your competitors are using AdSense syndication on content networks by performing a search on Amazon.com and then clicking through to a product from that search.

If you set up ad syndication you can bid separately on content ads. Bid whatever you determine to be fair market value for the Google AdWords distribution and then bid a separate lower value for content ads.

Some people like to use different campaigns or ad groups for content and search ads so it is easier to track the R.O.I. Some terms convert far better on search than content, and if these stats are blended it may be harder to notice the trends at a quick glance.

On some occasions it may make sense to make content only ads if you are trying to increase branding without spending a significant amount of money. Content ads are generally clicked on at a much lower rate than search ads.

In some rare cases content ads are worth more than search ads, but in most cases there is not as much implied buying demand when a person reads an article about a subject as when they are actively searching about that topic.

<b>Keyword Secrets</b> Generate Keywords Easy - Fully Automated Free Tool <a href="#">Ads by Google</a>	<b>SEO Toolbox</b> SEO isn't easy, but having the right tools helps. 
--	--

With your content ads you may also want to try using image ads to lock out competition from being able to advertise against you. Some of the terms that were disabled from search distribution due to low click price and low relevancy still may appear in the content network.

Syndicated ads do not appear on partner sites until they are approved by an editor. Many of my ads have appeared on Google.com prior to editorial review.

## How Google Determines AdSense Relevancy:

Google reads the content of AdSense publisher webpages to determine what their pages are about. When attempting to match ads with those pages Google considers:

- Not a single keyword, but the entire keyword list associated with an ad group.
- Adgroup creatives are also used to help understand what ads to display.
- Max PPC and clickthrough rate also play into the order of the ads displayed.
- You want to use well themed keyword adgroups to help ensure your ads are delivered properly. Including generic words like laptop can make it harder for Google to understand what your adgroup is trying to sell.
- Using appropriate campaign negative keywords can also help further target your ads.
- Google offers effective contextual advertising tips in this [free 9 minute video](#).

## Google AdSense CPM:

Most AdSense publishers do not make an exceptional amount of money for publishing AdSense since the ads do not usually have a high click-through rate. To help compensate for that, and to make AdSense more appealing to large traditional media buyers, Google also sells AdSense ads on a C.P.M. rate.

Advertisers can buy ads on off-topic sites for branding, but they have a 25 cent C.P.M. minimum, and will have to compete with the revenue earned by other advertisements, which could drive the price much higher. This will eventually cause people to significantly bid up the ads on some of the larger & more important AdSense partners.

Large publishers who do not want to compete with Google selling direct ads can optionally turn off the C.P.M. feature.

C.P.M. ads can also be targeted to a specific page or section if an advertiser does not want to buy ads across an entire site.

A good way to get your ads syndicated to content sites you want to be on without being forced to pay C.P.M. rates is to bid on common page text or names of sites you want to be on and only enable that ad to be displayed on the content network. That should roughly let you target some of your favorite sites and still only pay when people click on your ads.

## Filtering Junk AdSense Clicks:

Click fraud is a huge issue. Google now allows you to filter out sites that you do not want to advertise on. If a site sends you significant traffic that does not convert you can block their URL so your ads do not appear on their site.

[This tool](#), which I have not yet tried, tracks which sites your AdSense ads are appearing on. Sometimes low quality scrapper sites actually convert well since people only find them via search and immediately click an ad while still in search mode. You can't determine how well a site will convert without tracking it, although if you are getting a ton of clicks and suspect fraud then it is best to block the URL.

If you enable content syndication (displaying your ads on AdSense) make sure you filter out regions which have notoriously high click fraud (India and most of Asia) unless you are trying to target those regions.

## Why Lower Ads Often have Better ROI:

The lower ads have a lower bid price. That can help save money if the top placed ads are overpriced. Another great benefit of having a lower ad is that a user that clicks on one is more prequalified to make a purchase. By scrolling through a bunch of ads they have displayed a greater intent to make a purchase.

These two mathematical facts often mean that listing at 5 or 6 often provides a better ROI than listing at the top. You will need to determine the profit elasticity for your market to see what ad locations will return the highest overall profits.

## Lowering Click Price after Bidding:

After you get 10 or 20 clicks and have a decent click through rate you may want to slash your bids in half or by 2/3. Often it is best to start off with your ad around the #1 or #2 positions to collect feedback and then let it fall back after you drop ad price.

## Expanding Breadth:

If you are running your ads correctly the **availability of well targeted ads** should be what is limiting your spend.

If your ad spend is limited by a budget and you are ranking high for many of the search terms lower your max bid to lower the position down to 3 to 7. In doing so you will be able to show up on more search results and people who are looking at the lower ad positions are more prequalified to buy.

## Dynamic Keyword Insertion:

If you have a group of similar keywords that will still use the same body text you can enable this feature by writing out your normal body text, and placing {Keyword: default keyword} in the title of the ad.

When the keyword matching the search is greater than 25 characters the default ad title will show. Otherwise the ad will show the search term as the ad title. Also note how I capitalized the K and W in keyword. This makes the words in your ad title appear capitalized.

Having keywords in your title can help your title jump out at people and improve click through rates.

Google now also allows you to pass the referring keyword trigger as a variable in the actual destination URL. To pass the trigger keyword as a variable use `&kw={keyword}`. You can also track whether the clicks came from Google content ads or Google search ads by adding the following to your URL `referrer={ifsearch:GoogleAdWordsSearch}{ifcontent:GoogleAdWordsContent}`.

### Use Keyword Rich URL's to Your Advantage:

Often people view the URL as one of the most important parts of an ad. The ad title sticks out the most, but many people factor in the URL more than the copy. By changing your URL to a keyword rich URL you can sometimes raise your click through rate by 50 – 200%. A new throw away domain name only costs \$8 at [GoDaddy](http://GoDaddy.com).

If you have some high selling affiliates you may want to reward them by giving them their own keyword rich domain. This can also help some of your affiliates get their message through to customers since a few bad affiliates can get messages with your URL in it blocked from being received by people using AOL or similar email clients.

### Bid on Competitors Names or Products:

Trademark laws still have not been firmly set in this field. Google allows US and Canadian advertisers to bid on trademark names of their competitors. The competitors trademark names may not appear in the ad, but they can be used as the ad trigger word. I can tell you from personal experience that these terms are often super cheap and convert well.

If you use competitor names as the triggering word then you need to group that in an ad that is not using dynamic keyword insertion or your ad title will put you in trademark violation.

Keep in mind that since the laws are gray in this area you may run into some problems if you push the envelope and do not respond to complaints. I believe in the US trademark owners are required to inform you of the problem and give you a chance to fix it before they have a chance to sue you for damages (whether or not they can sue you is still somewhat up in the air).

I did this particular technique and ticked off about a dozen SEOs who made a few hate threads. I primarily was looking for AdSense ad space in articles, but some of the SEOs had nasty comments about the technique (although it is a rather common technique).

You may want to ask people before using their names if you think they may take it the wrong way. Another good way to appear on many of the content sites is to run your ads on phrase match for some of the more popular article titles in your industry.

A way to avoid the controversy associated with bidding on competitors names is to only bid on their names on content matched ads (ie: disable search ads in the ad groups focused on competing products).

### Viewing Geographically Targeted Ads:

Often people will target ads to a specific country. If you are not in the country you will be advertising in you can view the country specific ads by adding `&gl=country` code to the search string (ca for Canada, US for United States, UK for United Kingdom, etc).

If Google is mixing in state regional ads it will list the state name at the bottom of the ad.

Geotargeting can allow you to afford words which may be broader than your globally effective keywords since they geotargeting only delivers ads to locations you are interested in advertising at.

You may want to break your ads down by different price levels by country codes. One of my friends nearly doubled his ROI by placing ads from low converting countries in their own cheaper ad groups.

### Sending Users to a Landing Page:

The conversion process works best when you remove unnecessary steps. By sending a user to a focused landing page versus your home page you can improve conversion rates.

### Use Capital Letters:

Google will allow you to use capital letters at the beginning of words in the title and in the description. Using capital letters at the beginning of each word in your ad title and ad description can also help boost your clickthrough rate. Most people do not capitalize short words like *an*, *or*, and *a*.

### Split Testing:

Google will allow you to test multiple ads at any given time. Every week you should try to make a new ad and place it up against the best ad from the week prior. If you have an ad that is getting an exceptionally low click through rate and another pulling decent you can usually get rid of the bad ad after a few clicks on it.

Perry Marshall created a free online [Split Testing tool](#) which will help guide you using mathematics to determine if it is whether or not you have collected enough data to stop testing. He said he usually recommends waiting until it is at least 90% to 95% sure of the results (as determined by the software).

You can also make two copies of the same ad and send it to different URLs to test different landing pages.

When split testing you will want to turn off the auto optimization tool and you may want to limit the test only to Google so you can get the most accurate data.

### More Advanced Ad Testing:

I do not work with large enough accounts to have put extreme effort into some of my tracking, but a few other ad testing options are:

- **Split Testing:** explained above, but you can keep doing split testing over and over again, creating smarter and smarter ads
- **A/B/C testing:** make two identical copies of one of the ads and compare it to another. Run until the CTR of the same ads are nearly identical and then compare that rate to the other ad.
- **Quadrements:** use two title sets and two description sets which make 4 ads. Leave them unoptimized and run the AdWords account until a clear leading ad is found.
- **Taguchi Method:** a bit complex for this guide, as I have not deeply researched it and most people probably will not use it, but the Taguchi Method allows you to set up a large matrix of variables and determine what the best combinations are using advanced mathematics and minimal testing.

### If You Are Having Problems with a Word:

For your highest traffic and most expensive keywords you will usually want to make custom ads specific to each one. If you have a word that is giving you problems in an ad group, remove it from the ad group and set it out on its own.

Off the start you can try to exact match it for a while. If you try multiple exact match specific targeted ads for that keyword and still can not get it to run then that might not be a word worth running an ad for.

### Cheap Traffic:

Some AOL users have type search term here in their search queries. Some of them accidentally run the word here into their search term, such as *hereViagra* or *hereYourTerm*. Some people search for stuff like NBA Basketball.com. There is a ton of cheap targeted traffic if you are creative.

### Affiliate Ads:

Google only allows one affiliate or merchant ad per keyword per URL. This means that affiliates do not need to identify their relationships in the ads and whoever has the ad with the highest effective click price between the merchant and all of their affiliates gets their ad displayed.

Affiliates can still have their ads show up if they create white label affiliate sites with information about the products.

### Creative PPC Techniques:

Mikkel wrote a few good ppc tips in [this article](#). A few pointers he offered were:

- Think creatively.
- Do not point PPC ads at landing pages.
- You may be able to cloak pages that the ad editors see.
- Do not use the budget function.

Someone at ThreadWatch also mentioned that some of your most creative AdWords ad ideas might be best to try out on a Friday evening so that they may be able to run a full weekend before being spotted by an editor.

If you have the top premium AdSense position and also rank well in the organic listings you can help bump the #2 premium ad position down to the right rail if you edit your copy. It may take up to 3 days for an editor to read your new ad and raise both ads to the top of the results again.

### Getting Quicker Business Feedback:

When starting a B2B account it is often a bad idea to start an account on a weekend. Monday is usually the biggest spending day for most B2B purchases and is the best day to start your ads.

Lead generation may be a smarter way to dive into Google AdWords than trying to sell affiliate products. Since it is common to have a lead generation rate of 10-20% the feedback loop is about 10 times as fast as selling a product that may convert at 1-2%.

### Google AdWords Competitive Analysis Software:

Google does not give its users tons of information about competing sites. Recently a couple software products hit the market which ping Google and determine the ad display rate and average ad position for your ads and competing ads. You can use this information to see which competitors are most sophisticated and what positions have the most competition and perhaps profits.

[AdArchiver](#) is a cheaper lower end product. [AdGooroo](#) is a higher end more sophisticated system. Google also released an [API](#) which allows people to build interfacing software.

### Bidding on Your Brand (Important):

If you rank at the top for your brand name should you also buy the associated ad? My answer is usually yes for the following reasons:

- You can control the branding statement on your ads. You can't do that with your regular listings.
- You can point people at your landing pages or make special offers with the ads. Usually your home page ranks in the regular listings.
- If you are not advertising there then your competitors may be.
- If the top ranking ad is from the same site as the top ranking regular result then more people may click on your regular result.
- If you have affiliates make sure you are not getting in bidding wars with them. Create a consistent affiliate marketing plan that makes sense.

### Creating Ad Groups:

- Your most competitive or most important terms should usually be in their own ad groups so they are easy to monitor and so you can write ad copy that is precisely targeted to those terms.
- You may want to create a group for misspelled terms.
- You may want to create a group for mistyped domain names.
- You may want to create ad groups based on personality types.
- You may want to create ad groups for your most important products.
- You may want to create ad groups for seasonal or special promotions.
- You may want to create ad groups based on personality types.
- If you are bidding on contextual networks as well some people also use different groups for contextual ads due to different ad value and the desire to use different ad copy.

There are many ways you can split up your account. By creating and tracking various ad groups it makes it easier to monitor your return on investment, and adjust you're your ad spend accordingly.

### Deep Keyword Research:

Using deep keyword research is hugely important.

Yahoo! Search marketing places exact matches ahead of broad matches, so if your competitor bids \$2 for widgets and you bid 11 cents for buy widgets when people search for buy widgets your ad will list above your competitors ads even though your ad is a lower price. This allows you to get more targeted clicks at a lower price, which logarithmically increases your advertising return on investment.

There is something to be said for simplicity and ease of management, but using targeted permutations of your most important terms should drastically increase your ROI.

With Google AdWords they allow dynamic keyword insertion (mentioned above), that allows the search query to drive the ad copy. That increases your chances of having a higher clickthrough rate and lowering your cost per click if you bid on many variations of your most important Google AdWords keywords.

Below is a chart of some example term ideas (with the words slightly modified) and the associated conversion data from an actual AdWords account. Notice how the cost per conversion drops off when modifiers are added to the root term. By bidding on these additional keyword phrases I am paying less for higher targeted leads.

Keyword Phrase	Cost Per Click	Clickthrough Rate	Conversion Rate	Cost Per Conversion
abc tires	\$0.77	7.8%	1.86%	\$41.37
abc car tires	\$0.64	10.9%	1.92%	\$32.96
[abc tires]	\$0.75	10.1%	2.32%	\$32.01
abc sports tire	\$0.74	12.4%	2.91%	\$25.29
abc tire co	\$0.59	15.1%	2.70%	\$21.73
[a b c tire company]	\$0.56	<b>38.2%</b>	11.11%	\$5.03
abc tire products	\$0.74	17.3%	<b>22.22%</b>	<b>\$3.30</b>
misspellings	<b>\$0.21</b>	3.6%	1.82%	\$11.37

Adding modifiers will split up the traffic volumes to make some terms seem more profitable than they are and make other similar permutations seem less profitable than they are. The math from the above campaign was compiled over a year with hundreds of thousands of ad impressions to help smooth out some of the discrepancies.

You have to consider the cost of building and managing the account when building out your keyword list, but I tend to like using various matching levels and modifiers on my most important keywords.

### Additional AdWords Resources:

- Google offers a [free ebook](#) to help you get the most out of your Google AdWords account.

- Many of the Google AdWords tips I learned came from Andrew Goodman's and Perry Marshall's reports.

## MSN AdCenter

MSN recently began their pilot ad test. They are randomly selecting some of the participants to the new program. MSN AdCenter will operate much like Google AdWords, but also allow:

- day parting ads (turning bidding on or off at different times)
- bidding based on demographics details

During the pilot test MSN's internal ads will show 25% of the time and Yahoo!'s ads will show the other 75% of the time. France and Singapore were the first two test markets and now MSN is testing AdCenter in the US, among other places.

There is no guarantee they will accept you right away, but you can sign up for the MSN ad pilot at <http://advertising.msn.com/adCenterPilot/89621.asp>

- Enhance Interactive (<http://www.enhance.com>)
- 7Search (<http://www.7search.com>)
- Findology (<http://www.findology.com>)
- Search123 (<http://www.search123.com>)
- Epilot (<http://www.epilot.com>)

## Some Notes

- Sign up for a Google AdWords account (one time \$5 fee which is converted into bid credits) (<https://adwords.google.com/select/main>)
- Write down 5 generic terms for your website. Check the traffic for these terms using the Yahoo! Keyword Suggestion Tool. (<http://inventory.overture.com/d/searchinventory/suggestion/>)
- Search for these terms and view how much people are bidding using the Yahoo! bid price tool. ([http://uv.bidtool.overture.com/d/search/tools/bidtool/?Keywords=yourkeyword&mkt=us&lang=en\\_US](http://uv.bidtool.overture.com/d/search/tools/bidtool/?Keywords=yourkeyword&mkt=us&lang=en_US))
- Do the words seem like they are worth their price? Do these prices surprise you?
- Check the price of these same words with your Google account. Are these prices close to one another?
- Write down 10 negative keywords for your site. Why are these words bad?
- Write down 10 phrases you think you can make a killing off of. Why are these phrases good? Check the prices, are you going to be overpaying for generic terms? If they are generic write down ten more terms and compare their prices.
- Before spending money on pay per click you should spend hours writing ad copy and many hours performing keyword research.
- If you intend to spend heavily on Google AdWords you may want to read the additional reports I linked to. You only need to find one or two good tips from a different perspective for those reports to pay for themselves.
- If you are interested in learning more about improving you organic SEO rankings and increasing your traffic today [buy The SEO Book](#). It will help you learn all about
  - **Keyword research;**
  - **Choosing a search engine friendly domain name;**
  - **Placing keywords in your page copy;**
  - **Website submission;**

- Link building techniques;
- Effectively using the best SEO tools;
- Tracking your progress;
- and many other important SEO topics.

**Best of luck with your ads, your site, your career, and your life.**
